Multi-Carrier Shipping Software Targets High Volume Shippers Needing Fast Package Processing Speeds

FORT MYERS, FL – April 25, 2016 – Today, Harvey Software, Inc. detailed how its Multi-Carrier shipping software now provides high volume shippers with the fast package processing speed they need every day. Different from shipping systems that use the Internet for every processing step, Harvey Software's Computerized Parcel System (CPS™) rates, prints labels and links to data directly from the shipping computer instead of over the Internet. The result is shipping software with dramatically fast and reliable package processing. An online Internet connection is needed only at the end of the day's shipping. For companies shipping 50 or more packages per day, this direct package processing capability significantly boosts productivity and increases savings for both UPS and USPS shippers.

"High volume shippers rely on fast package processing and a dependable shipping system. By bringing the package processing steps directly into CPS instead of relying on Internet-dependent programs, CPS users enjoy UPS and USPS eVS (electronic manifesting) package processing times of as little as under one (1) second," stated Bert Hamilton, Harvey Software's President and CEO. "This means substantially better efficiency for both UPS and USPS shippers. For the USPS, eVS accommodates high-volume package shippers and package consolidators by documenting and paying postage with electronic manifest files. Since all USPS eVS shipping calculations and labeling are done directly in CPS, no Internet-based or other software is needed," continued Mr. Hamilton. "UPS domestic and international services, as well as UPS Mail Innovations shipments, are processed the same quick, easy way. So whether it's UPS or USPS, the result is fast, easy shipping, and when it's fast and easy, money is being saved," explained Mr. Hamilton. "Using these CPS features, shippers can rate shop each carriers' services to the best price advantage, complete all their shipping with every carrier on one station, and use the same process to ship every package," Mr. Hamilton stated. "No shipping software provides more than CPS for UPS and USPS shippers," concluded Mr. Hamilton.

About Harvey Software, Inc.

Founded in 1983, Harvey Software is a pioneer of carrier neutral, multi-carrier shipping software solutions providing businesses with high volume shipping solutions. Harvey Software's shipping software solutions are all powered by the Computerized Parcel System (CPS™) which increases profits, boosts domestic and international shipping efficiency, greatly reduces shipping expenses and eliminates the inefficiencies of single carrier software systems. Shipping software systems Powered by CPS are UPS Ready®, USPS® eVS certified, supports FedEx® Web Services and work with USPS Internet Postage. CPS Powered solutions can be purchased, downloaded, installed, updated and supported all over the Internet. Millions of packages are shipped every day using CPS Powered solutions.
