Multi-Carrier Shipping Software Adds Support for Fairbanks Ultegra Scales

FORT MYERS, FL – September 11, 2013 - Today, Harvey Software, Inc. announced that its entire line of CPS™ Powered multi-carrier shipping software now directly supports the Fairbanks Ultegra shipping scale, providing shippers with yet another USB connected shipping scale for their package shipping operation.

"We are pleased to have worked with Fairbanks to give our CPS users the option to use the very reasonably priced Fairbanks SCB-9000 scale, which is well-proven in shipping departments around the country," stated Bert Hamilton, Harvey Software's President and CEO. "Simply connect the scale to a USB port on the shipping computer, then choose that scale in the CPS Setup program and CPS users are ready to go," explained Mr. Hamilton. "Fairbanks has sold over 100,000 of these scales, so adding this well-established scale option is a significant plus for our shipping software users. The Fairbanks scale is a welcome addition to the USB scale models supported in the latest release of our CPS Powered shipping software," concluded Mr. Hamilton.

"Fairbanks Scales' Ultegra Series parcel shipping scales have been a popular choice for shipping operations for more than a decade," stated Terry Clark, Product Manager at Fairbanks Scales. "The accuracy and dependability of the Ultegra scale, coupled with the ease of use provided by the CPS multi-carrier shipping software, delivers a money-saving shipping management system," added Mr. Clark.

The Fairbanks Ultegra scale adds another popular electronic parcel scale to those already supported by the entire line of shipping software products Powered by CPS™. For a complete listing of hardware supported, visit http://www.HarveySoft.com and click on System Requirements at the bottom of the page.
